CLAIMS

1. A device for treating fabrics in a tumble dryer
comprising: a reservoir for storing a fabric treatment
5 composition and transfer means to expose fabric treatment
composition from the reservoir to airflow generated
inside the tumble drier and/or to directly contact
fabrics in the dryer, thereby transferring a portion of
the fabric treatment composition into contact with
10 fabrics in the tumble dryer during a tumble drying cycle;
characterised in the provision of reservoir charging
means comprising one or more charging conduits for
directing fabric treatment composition to one or more
regions of the transfer means.
- 15 2. A device according to claim 1 wherein the reservoir
charging conduits are defined by one or more projections.
3. A device according to any preceding claim wherein the
reservoir charging conduits are defined by one or more
projecting ribs.
- 20 4. A device according to any preceding claim wherein the
reservoir charging conduits are defined by an arrangement
of corresponding peaks and troughs.
5. A device according to any preceding claim wherein the
reservoir charging conduits are aligned e.g. parallel.
- 25 6. A device according to any preceding claim wherein the
reservoir charging conduits are defined by a plurality of
aligned, for example, parallel projections.
7. A device according to any preceding claim wherein the
reservoir charging conduits are radially arranged, for
30 example about a centre of the reservoir charging means.

- 17 -

8. A device according to any preceding claim wherein the reservoir charging conduits are defined by a plurality of radially arranged projections.
9. A device according to any preceding claim wherein the
5 reservoir charging conduits are defined by a combination of aligned, for example parallel projections/conduits and a plurality of radially arranged projections/conduits.
10. A device according to any preceding claim wherein the reservoir charging conduits include straight projections.
- 10 11. A device according to any preceding claim wherein the reservoir charging conduits include curved projections.
12. A device according to any preceding claim wherein the reservoir charging means has a common perimeter with the reservoir.
- 15 13. A tumble dryer with a device according to any preceding claim attached therein.
14. A device substantially as hereinbefore described with reference to and/or as illustrated in the accompanying drawings.
